

Package ‘dina’

October 13, 2022

Type Package

Title Bayesian Estimation of DINA Model

Version 2.0.0

Description Estimate the Deterministic Input, Noisy “And” Gate (DINA) cognitive diagnostic model parameters using the Gibbs sampler described by Culpepper (2015) <[doi:10.3102/1076998615595403](https://doi.org/10.3102/1076998615595403)>.

URL <https://github.com/tmsalab/dina>

BugReports <https://github.com/tmsalab/dina/issues>

License GPL (>= 2)

Depends R (>= 3.4.0), simcdm (>= 0.1.0)

LinkingTo Rcpp (>= 1.0.0), RcppArmadillo (>= 0.9.200), simcdm, rgen

Imports Rcpp (>= 1.0.0)

Suggests CDM, covr, testthat

RoxygenNote 6.1.1

Encoding UTF-8

NeedsCompilation yes

dina

Generate Posterior Distribution with Gibbs sampler

Description

Function for sampling parameters from full conditional distributions. The function returns a list of arrays or matrices with parameter posterior samples. Note that the output includes the posterior samples in objects.

Usage

```
dina(Y, Q, chain_length = 10000)
```

Arguments

Y	A $N \times J$ matrix of observed responses.
Q	A $N \times K$ matrix indicating which skills are required for which items.
chain_length	Number of MCMC iterations.

Value

A list with samples from the posterior distribution with each entry named:

- CLASSES = individual attribute profiles,
- PIs = latent class proportions,
- SigS = item slipping parameters, and
- GamS = item guessing parameters.

Author(s)

Steven Andrew Culpepper and James Joseph Balamuta
